

S.No: 3	Exp. Name: <b>Write a C program to convert the given temperature from Celsius to Fahrenheit</b>	Date:2022-12-30
---------	-------------------------------------------------------------------------------------------------	-----------------

### Aim:

Write a program to convert the given temperature from `celsius(C)` to `fahrenheit(F)`.

During execution, the program should print the following message on the console:

C:

For example, if the user gives the **input** as `1.23`:

C: 1.23

Then the program should **print** the result as:

F= 34.214001

**Note:** Use the `printf()` function with a **newline** character (`\n`) at the end.

The formula to find **fahrenheit** is `fahrenheit = celsius * (9.0 / 5.0) + 32.0`.

### Source Code:

Program305.c

```
#include<stdio.h>
int main()
{
    float c,F;
    printf("enter C : ");
    scanf("%f",&c);
    F=(c*1.8)+32;
    printf("F = %f\n",F);
}
```

### **Execution Results** - All test cases have succeeded!

Test Case - 1
User Output
C: 0
F= 32.000000

Test Case - 2
User Output
C: 32
F= 89.599998
